# Why Outdoor Lighting is Important

Light during the day is different from how it is seen come nighttime. It is more important, of course, to have proper lighting at night – especially in pathways and other outdoor spaces.

## Benefits of Outdoor Lighting

**Beauty** – Having the right outdoor lighting creates a pleasing ambiance on decks and patios. It also helps in making the exterior of a home more appealing from the sidewalk. It adds a touch of elegance.

**Security** – When you have outdoor lighting, it also help keep your home secure. If your entryways, garages and dark walkways are well-illuminated, you will easily see potential intruders and anomalies.

**Safety** – Another important benefit of having outdoor lighting is safety. By keeping your pathways well-lit, it is easier for your guests to navigate their way around without losing their steps.

# Importance of IP Rating in Outdoor Lighting

When placed outdoors, lights can meet all sorts of external forces including being accidentally touched or stepped on, accidental force from tools, wildlife activity, dust, dirt , wiring , rain, wind and water submersion.

All these elements can cause damage and malfunctioning in the outdoor lighting if it doesn't have the **correct level of protection** for where it is placed and the elements it meets.

## IP Rating for Outdoor Lights -

Outdoor Lights require a higher level of protection since they are often walked upon and jet-washed.

**Minimum of IP 65 rating** is required to protect the lighting against the highest level of dust, harmful deposits and human contact. This rating will also protect the lights against water jets, allowing them to be jet-washed without risking damage to the light or accidental electrocution.
