**Improved weigh correction &
pouch give away %
with minimal human inter friction**

Packaging Solutions That Matter

Canny Coverage efficiency with technology for measurable result

INTRODUCING THE CANNY 90 VFFS 10H 2.5L M/C.

The Canny 90 is part of canny VFFS family which have been designed to increase your productivity. The Canny 90 utilizes the latest technology to help reduce flexible packaging wastage/erros & improve total cost of ownership through years old proven cost effective solutions.

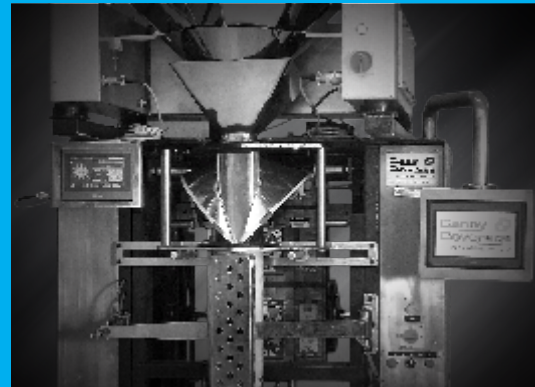

10 Head Weigher gives you the correct weight every time & the most reliable UI of weigher easy the operation for the laymen working with it.

Pro Series Bagger gives you simplest usability with less than 1% material loss & with increased speed & stability

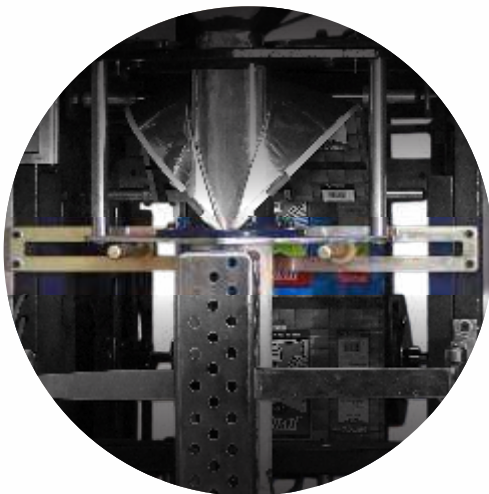

Improved feature for Canny 90

Un common shaped forming caller
increases the paper stability
& allows paper to shape itself improving
the sealing finishing & strength.

Caller change is now no matter of
concern as this machine is equipped with
helping hand to the operator.

One touch operation on HMI helps the
operator to reduce stoppage time of machine

- Auto sensing heater
 - Auto fault detection system
 - Auto length set...
- are some features which increases machine's uptime.

Integration

This bagging machine can be integrated with all types of filling systems such as...

- (1) Auger Metric Filler
- (2) Volumetric Filler
- (3) Cutgate Weigher
- (4) Liner Weigher
- (5) Multihead Weigher

Machine's point of USP is its moving jaw/table draw system for pulling. Paper pulling is most critical system in other variants but for this machine is no big deal. Our table draw system work on 3 phase motor & gear box with a single cam system.

This reduces the wastage caused while changing callers & pulling belt setting. Also increases machine life by high strength steel body to ensure jerkless operation.

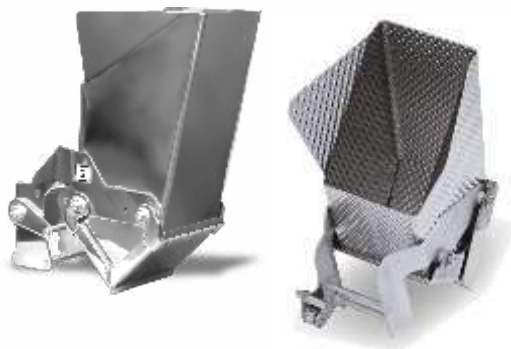

10 Head Weigher

India's first in-house manufactured multihead weigher. This machine tries to give flawless & most convenient UI for operator.

You just need to give target weight & that is all. Other things will be done by its own. All components work on there own auto computing program reducing human interference. ie. according to product the vibrators will set automatically, bucket speed can be change as per material's flowing speed by its own.

Smart buckets gets your work done by there own it opens itself more or less with reference to material flow.

All components inside have self diagnosis & fault detectors so that you may not need to stop the production. They can bypass the fault/componant misbehaving

Technical Specification

	BAGGER SIZE - S	BAGGER SIZE - M
Max. Laminate width	420mm/Customized	520mm/Customized
Volume	1Kg / 1Ltr. / Customized	2Kg / 2Ltr. / Customized
Pro Series Output	@80 pouch per minute depending upon flow rate & volume.	@60 pouch per minute depending upon flow rate & volume.

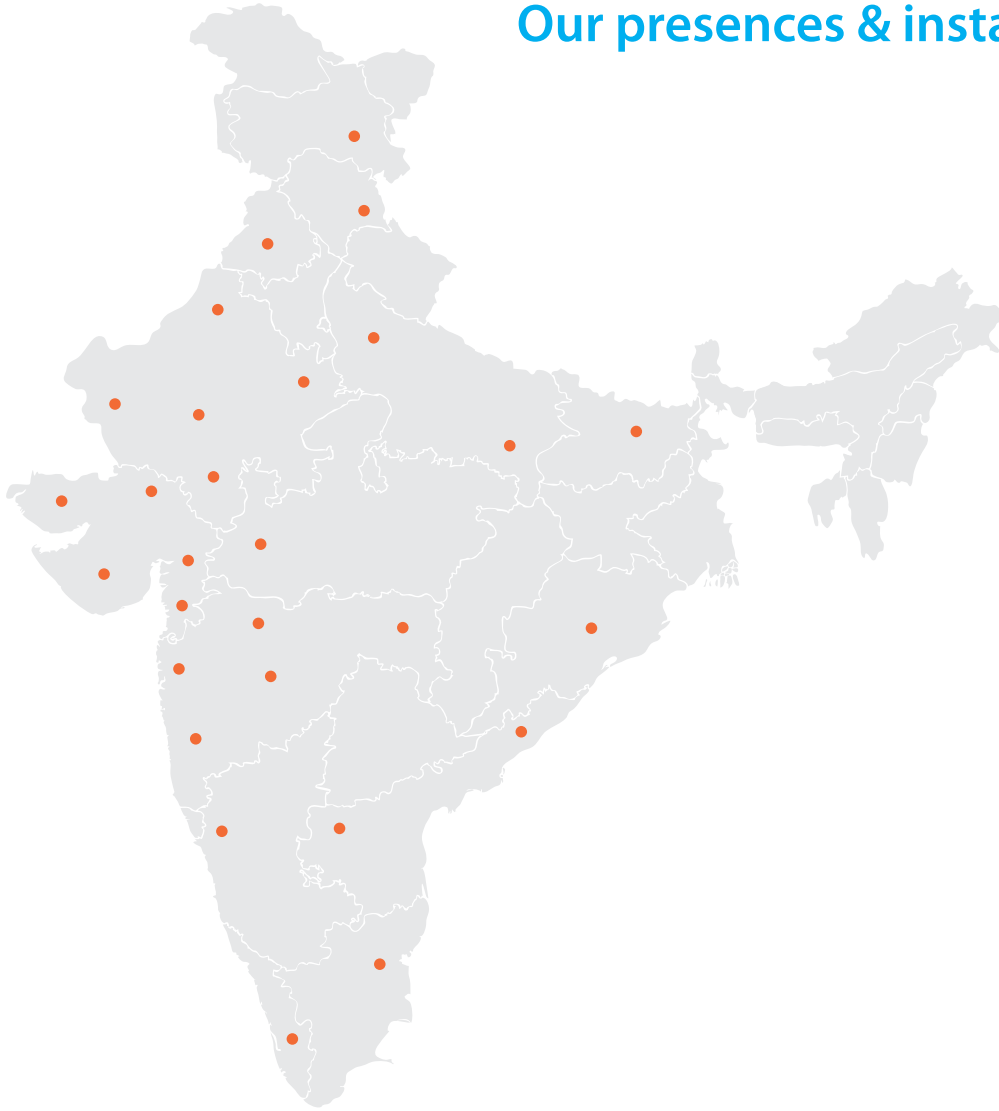

MULTIHEAD WEIGHER

Weighing Capacity/Range (per single dump)	up to 2000g	
Maximum Volume for Weighing (per single dump)	Maximum 3000cc	
Weighing Speed (Max)*	75wpm	
Minimum Graduation	0.1g	0.2g
Touch Screen Display (RCU)	10.4 Colour Display	
Weigh Cell	Double-beam strain gauge load cell	
Number of Presets	50	
Material	Product surfaces are made of stainless steel or other sanitary materials	
Machine Weight	350kg	
Options	Various options are available	
Power Consumption	200 - 240V 0.8kW	

Design and specifications are subject to change without notice.

*Depends on product shape, product density, target weight etc ** Machine bodies can be painted mild steel (PB) or stainless steel (SS), with an IP65, water-resistand option (WP).
