

WHITE ROOFS FOR COOL HOMES!

Effective Technology For Cool Homes

The global warming is a reality now. The temperatures are rising all over the world. The urban heat island effect is faced by all urban areas. With continued urbanization, the roof of the buildings are absorbing much more solar radiation and reflecting very less.

It is the need of the hour now to contribute towards reducing the urban heating to certain level.

It has been stated by the researchers that Lighter land surfaces "could help to lower temperatures by 2 or 3 degrees Celsius"

Another major concern about the roofs are wear and tear such as ageing, water seepage, abrasion etc.

Keeping all this into consideration, we have a one stop solution, "HEAT REFLECTIVE COATING".

“ Stop Climate Change right from your roof. ”

Advantages of White Roof:

Solar yield increases

Keeps the roof cool

Very little maintenance

Aesthetically pleasing on the roof

Acts as waterproof coating

ADVANTAGES

Reliability and Stability

High Solar Reflectance & Thermal Emittance

Rainwater run-off increases thereby increases rainwater harvest

Clean and green roof

Energy consumption reduces

OTHER SERVICES:

ON-GRID SOLAR PV SYSTEM

HYBRID SOLAR PV SYSTEM

RAINWATER HARVESTING

GOUNDWATER RECHARGE
