Wind Mill & Biogas

Company Profile

Dharti Care Renewable Energy is driven by and committed to providing State of the art solutions.

We offer diversified services in the renewable energy and clean tech space. We are one of the Major contributing in the indian Solar Energy sector with Small, Mid & Large Scale Projects under execution.

Dharti Care Renewabe Energy Provides Customized Rooftop & Ground Mounted Solutions for Residential, Commercial, Industrial, Institutes, Petrol Pumps and Hospital Based on the Site conditions it can be Solar On Grid or Hybrid or Off-Grid.

With quick turnaround time, from initiation to completion, we ensure that the customer is at the heart of the organization. We guarantee delivery in our committed time frame. We also provide integrated Design & Engineering Services from Concept to Commissioning.

Mission

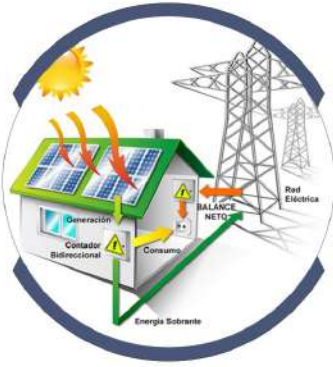

- ▶ To Provide innovative, applicable focused solutions to enhance value of our customers.
- ▶ To boost and maintain the success of our customers and employees by investing in the best services people, Technology and offering the best products to enhance the return on investment for our customers.
- ▶ To be the most trusted Renewable energy product distribution by providing quality services, relationship, profitability and best soutsions to customers.
- ▶ To educate, promote and transfer innovative, modern, efficient technology and ideas in solar sector through continuous Renewable Energy.

Vision

To become world's leading organization by providing complete high-tech solution for modern and innovative technology in the Renewable energy.

Continuously improve our products & services to become preferred and believable partner of our customers.

Our Products

On Grid System

Grid-tie system allows you to sell excess electricity back to the grid utility with net metering system. Work with batteries and hence very low maintenance and requires less monitoring. Can be designed with and without batteries.

Off Grid System

This type of solar electric system is not connected to electricity grid

Stand-alone system for remote areas. Can be designed to provide power for a certain number of days (night) in row when sun is not available

Solar Water Pump

Each solar array has a number of Solar modules connected in parallel or series.

The electrical energy from the entire array is controlled, tuned and directed by the inbuilt controller in DC pumps or through the Variable Frequency Drive (VFD) and enables the connected pump (may be submersible or surface) to draw water and feed the delivery pipelines.

Solar Street Light

Solar street lights are raised light sources which are powered by solar panels generally mounted on the lighting structure or integrated in the pole itself.

The photovoltaic panels charge a rechargeable battery, which powers a LED lamp during the night.

Solar Water Heater

Conversion of sunlight into heat for water heating using a solar thermal collector.

Used for Residential, Commercial & Industrial Applications.

Biogas Plant

Biogas is a methane rich flammable gas that results from the decomposition of organic waste

material is also called as 'marsh gas'.

This type of biogas comprises primarily methane and carbon dioxide.

Scope of Services

Site Survey

Performance Testing

Installation & Commissioning

Design & Engineering

Equipment Supply

Operation & Maintenance

Faster Return
on
investment

All solutions under one roof

Webbased monitoring

Key Features

Power backup for
non-sunny days

Actual PR to Guaranteed
PR more than 100%

WARRANTY

Performance Warranty
upto 25 years
for Solar Panel

Greener Earth for Our Future Generation
