

# Gas Water Heater

**Crompton**  
India's oldest electrical equipment manufacturer

## Gas water Heaters 2021-22

Instant Hot water with 5 layer safety

# Why gas geyser

In the todays Pandemic situation preference is toward the hygiene and instant Hot water is the preferred choice.

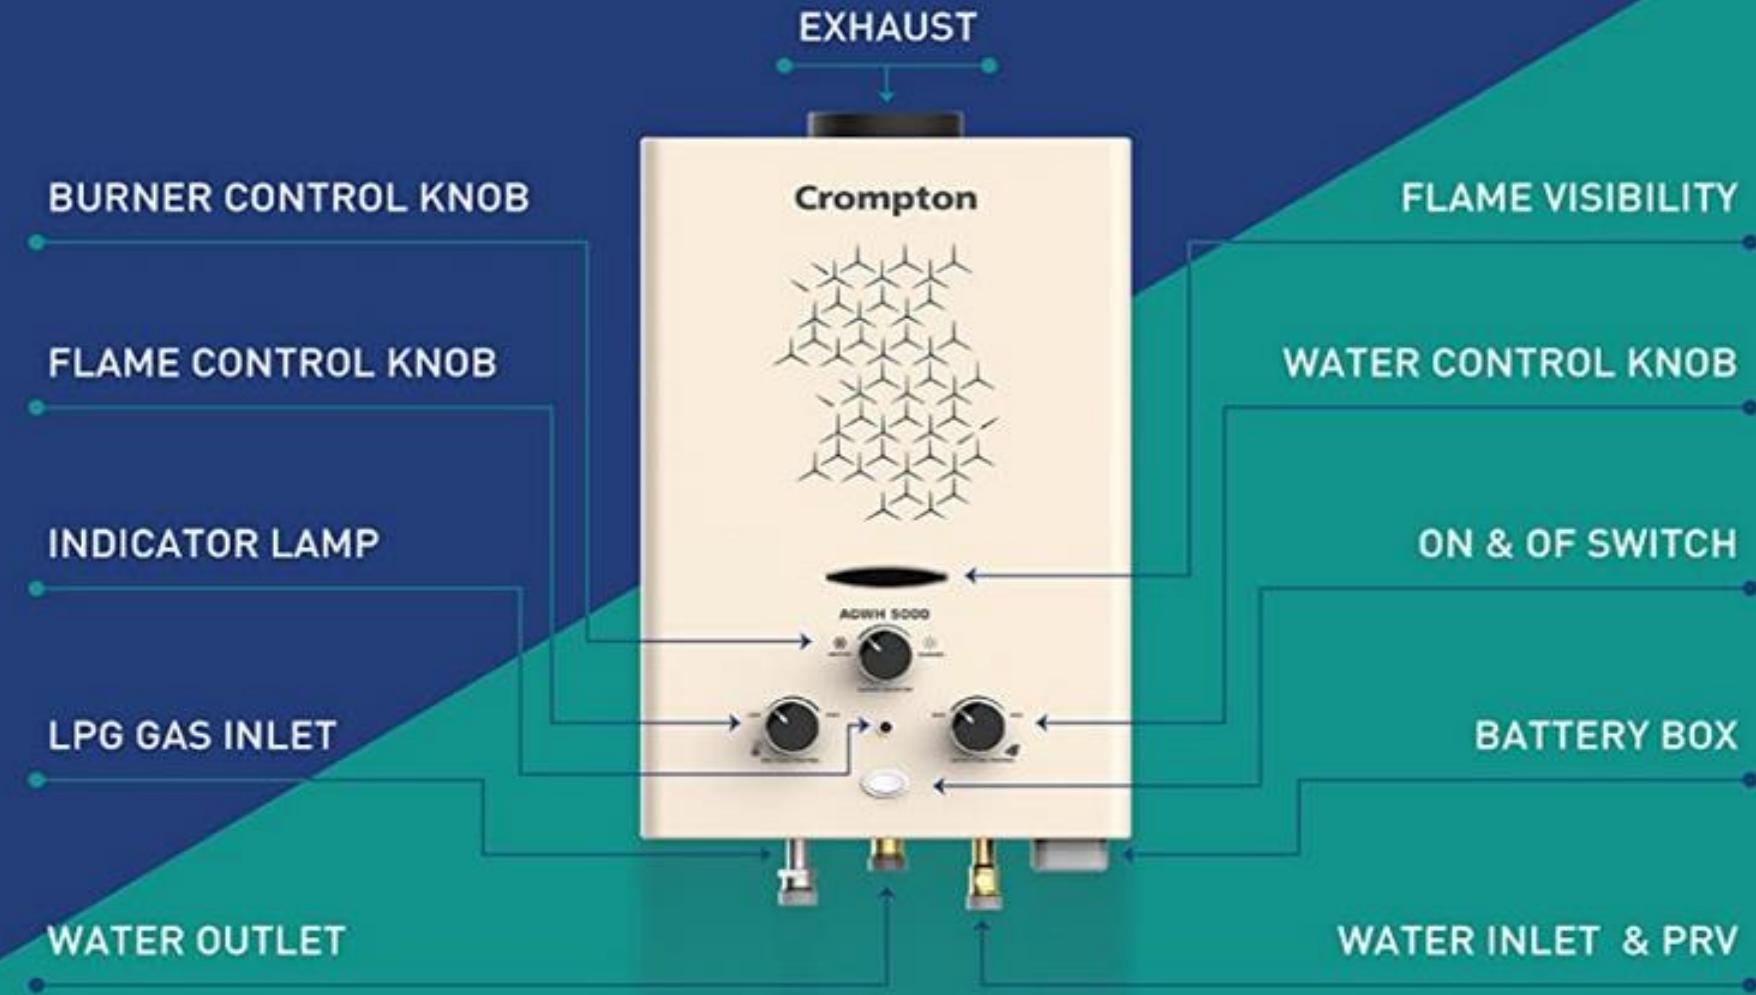

Gas geyser provides instant hot water at low cost compare to the electrical heating solution

In comparison gas water heaters are available with 10KW rated out put so it will heat the water 3 times faster than an instant electric water heater and thus it would take just 10 seconds to heat 1 liter water by 25 degrees. This means that you will get hot water much faster

No dependency on electricity Since it work on gas which is reliable source of energy

GAS WATER HEATER

# Gas Water Heater – Features

Crompton

## Instant Heating

Gas water heaters are available with 10KW rated output. This enables them to heat water 3 times faster than electric water heater.

## Summer / Winter Burner Selection

2 Level of burner selection enable you to control the temperature of water according to your comfort.

## Heavy Duty Copper

Copper is one of the best conductors of heat. This enable effective displacement of heat. The heavy duty copper used is designed to last long.

## Powder Coated Anti-Corrosive Steel

The anti-corrosive steel body is powder coated to give an extra layer of protection. This ensures the heater lasts longer.

## Automated Ignition System

Gas water heater detects water flow & ignite the gas. The flame travel uniformly and ignite all the burners. Once the water flow stop it will automatically stop the gas flow and shut down the Gas geyser.

## Suitable For Low Pressure

The water heater is perfect for multi-stories building and is suitable for low pressure application.
