About us

- A Fusing Machine is a machine that uses heat (temperature) and pressure to fix the rhinestone on the fabric and also convert the val (satari) into pipe (Beads) and also to remove shrinkage effect the Fabric with help of pressure.

Features

- Temperature Control : Precise temperature settings to accommodate different fabric types and adhesive requirements.
- Pressure Setting : Adjustable pressure to ensure proper bonding without damaging the fabric.
- Speed Variability : Option for adjusting the speed of the fusing process to match production needs.
- Safety Feature : Built-in safety mechanism to prevent overheating and accidents during operation.

Advantages

- In this machine 6 and 9 heater option are available.
- There is no plausibility of fabric shrinkage.
- Auto belt alignment system is used to reduce the Machine maintenance.
- In this machine uses a **Chinese mica** heater, and we have also used a 100mm silicone roller.
- For this reasons, it is mostly used in garments industries.
