Our Uniqueness

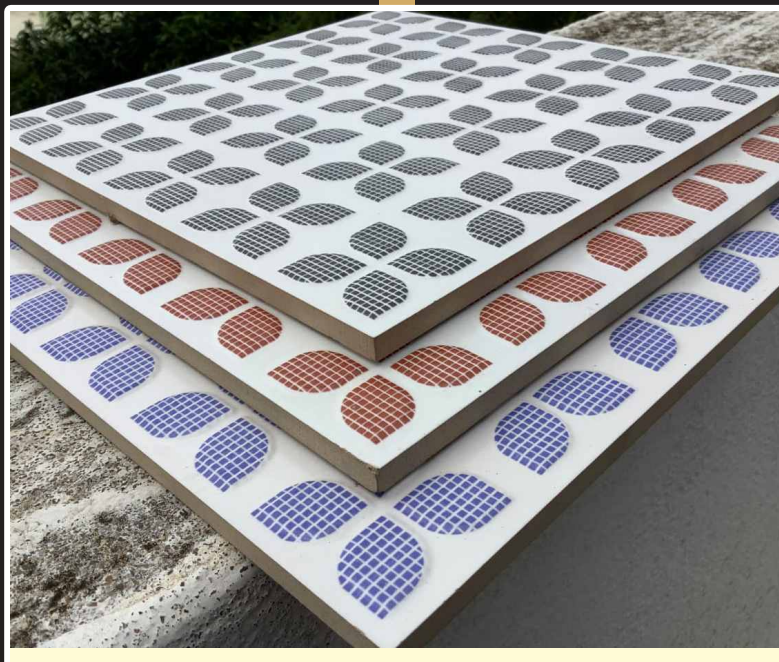

We provide the entire roofing solutions

Since we are the Manufacturers, Distributors & Retailers of cool roof tiles, direct marketing ensures smooth relationship between the Customers Site visit by the Professional technicians Suggest the roofing solution in accordance with the building condition We are not filling the gaps instead professionally affording roofing solutions Buy cool Be cool Entire one stop shop for roofing solutions Affordable cost that suits diverse customers in all aspects

SUPER COOL CERAMIC TILES:

Terrace and the roofs are the most vulnerable part of a house that is exposed to the climate. They withstand the extreme heat from sunlight, acids, rain, snow, seeping etc everyday of the year. We at Super Cool Roof are here to provide the most superior protective layer to that very vulnerable part of your home. This is done by one of our most premium product - Super Cool Ceramic Tiles. Your house's terrace and roof's life can depreciate at higher rate unlike other parts of your house if left unprotected and can allow the heat it absorbs to enter your rooms, leaving it hard for you to stay interior. Super Cool Ceramic Tiles gives life time guarantee for your house by eliminating this very function out of the equation as the materials in the tiles enables it to not absorb the heat and additionally it allows the interior temperature of the house to stay less compared to the outer temperature, thus providing a cool environment for you and your family to live. This product of ours comes in various designs and colours which enables you to have your roofs and terrace be designed with image, patterns, etc.

- Extreme heat or cold will not affect your building in the first point
- 98% Heat Reflection
- 100% Water Proof Tiles, & Stain Free
- No Maintenance Cost
- Lay it & stay super cool
- Fire Proof & Energy Saving, Anti-skid surface, Anti Algae
- Worthy for your hard earned money
- Aesthetic appearance on the Terrace
- Provides Thermal Insulation with Superior Passive Cooling Technique
- Eco-friendly Product – Provides Natural Air-conditioning
- Reduces Inside Room Temperature minimum 5 to 8 degree Celsius
- Replaces lime/press tiles terracing; Hence Reduces the dead load of building

Construction Chemical

AguaPROOF™ is a new generation versatile nanomaterial which imparts excellent water repellency to siliceous surfaces. It is suitable for wide range of masonry substrates such as concrete, all kinds of bricks and various types of natural stones.

ADVANTAGES

- Water soluble product, easy to apply
- Protected surface 'BREATHES' - **AguaPROOF™** does not trap moisture
- Chemically reactive and penetrative technology
- Provides long lasting protection
- Does not form a surface film or gloss

AguaFILL™ is used to form a cross linked membrane on concrete. Cracks can be filled by mixing **AguaFILL™** with cement and sand. It is used to treat micro/macro cracks and pores in structures.

The composition provides high strength, is UV stable and provides elongation of upto 3 times.

ADVANTAGES

- Forms cross linked seamless membrane which increases strength
- High elasticity with elongation upto 3 times
- Ideal for filling micro as well as macro cracks
- Provides long lasting protection

Aguafix is used to form a water resistant bonding layer on Aguaproof treated material. It provides excellent adhesion for concrete plaster/paint/tiles on waterproofed surfaces.

Agua Dry is a water-soluble silane-siloxane compound. This new generation substance is based on reactive and penetrative technology. Unlike conventional water repellency products which form a surface film and therefore have a limited shelf life, Agua Dry penetrates 0.5 - 2 mm into the substrate and reacts with it, which creates a very strong bond that is difficult to break.

THERMAL PLASTERING
