Serving with integrity

Respond to dynamic market changes

Treating ourselves and our business in an honest, ethical and trustworthy manner.

Work towards 'win-win' solutions

Relationship means a lot in business.

Providing financial stewardship

Growing through innovation and creativity.

Why Tensile Structures?

- **Reach look with durability:**

Unlike any usual shade with profile sheet or anything, Tensile Structure has USP to maintain the elegance of premiumness along with durability of more than 10-15 years warranty.

- **Variety of colours:**

Tensile Structure comes in variety of colours but the most preferred one is white. This is due to the package deal simplicity with reach look in white.

- **ISI marked MS structure:**

As we are talking about a architectural design for durability of more than a decade with high stretching and tension, any local MS material is not compatible here. So we prefer using only ISI market MS structure of brands like TATA, APPOLLO, JSW, etc which further coated with top quality primer and best grade paint like EB1 of Asian paints.

- **Light reflection:** The fully stretched and tensioned fabric contributes in light reflection upto 80% which makes a perfect deal for evening's dinner. The brightness that it creates nudges the pleasant feel at its optimality.

- **Layers of protection:**

Not just a fabric but it comes with PVC fabric that is coated by mesh yarn to reduce the temperature and the PVC lacquering to maintain its durability for years and years. Additionally Tio2 (Titanium Dioxide) lamination can be provided to achieve next level in its uniqueness.

- **Dirt and fungal resistance:**

Imaging the shade after years with cracks and dirt on its surface due to fungal and chemical reactions. But that does not happen here. The PVDF lacquering is responsible to save fabric from all such problems.

- **UV retardancy:**

The scientific and architectural contribution helps to avoid UV rays and gives you the same feel just like sitting at home. That's the reason the structure has been preferred as fixed structure as membrane for many restaurants, malls and airports.

- **Thickness and weight:**

If we're looking for a shade for temporary 1-2 years purpose then Tensile is not a good option for sure. It is more like permanent structure with fabric weight of 550-1600 GSM and thickness of 0.4-1.5 mm without hassle of heavy installation and removal as per convenience.

- **Tear and flame retardant:**

Imagine, an object falls on the structure membrane or a monkey jumps on it. Will it tear down? Well, No! The tear strength of 450/450 N offers a property which makes the fabric tear resistant and flame resistant coating saves it from sudden small fire.

Parking is the most common application

Resort canopies are emerging demand

Our Designs : **CONICAL & GAZIBOS**

The conical shape tensile structure provides an aesthetic look. It creates a large ambiance that can be covered with the minimum column, you can use the high center point design that creates the outdoors view eye-catching. Interior structure's material & choice is much used for wider ceiling and screens..

Our Designs : **PARKING SHADES**

The car parking structure that protects your vehicle from outdoor weather. Top quality raw materials are used to manufacture these structures so that they have durability and longer life. They are available in various colors, and different shapes of structures such as, Arch shape, vault shape, hyper shape, cantilever structure & conical shape.

Our Designs : **INVERTED UMBRELLA**

The inverted cones are designed fabricated and installed cone as unique design an integrated down spout that links into the site storm drains. There are no need for down spout and gutter the highly durable PVDF coated membrane will deliver excellent performance inverted umbrella are sitting the walkways, drop of zone entrance, visual appeal the building.

Our Designs : **SWIMMING POOLS**

The pool structures enough sheds and enough sun. The cantilever structure at edge of the pool or around the pool is required with damaging UV rays. and much need sun protection sails structure are commonly most shape triangular or hyper according to area you have and the effect you want to create.

Our Designs : **SAIL SHADES**

The sail shade are used to cover the open areas of your residence such as garden area pathway cover, pool cover, cafee area, car park. All our shade sail are built with waterproof fabric, fire, and tear resistant material. Self-rinse during rainfall.

Our Designs : ENTRANCE SHADE

The entrance shade covers the entry area of your home, office, and restaurants and keeps them protected from the sun's UV rays. It offers customers, employees, tenants and visitors protection from heat, rain, and harmful UV rays travel by foot and from destination points at your location. The walkway tensile canopy we install, building to building and entrance gate to the administrator office block, retail spaces, hospital, school, and college.
